MÉTROPOLE**

**INDIA-EU ICT standardisation  
Smart Cities Workshop**

**New Delhi  
21 April 2017**

# From demonstrators to large Scale deployments

- All major European cities are eager to deploy new smart city services on a large scale.
- Facing this demand, the providers offer solutions that respond to highly variable functional perimeters which are not often interoperable between them.

# A complex Smart City eco system

# Cities needs

- Guidance
- Indicators (KPIs)
- Confidence in investments
- Tangible proof of concepts and showcases
- Plug tests

# Eurocities KSF standards and Interoperability WG

- lobbying for less technical guidelines on S&I.
- Defining and listing cities' needs on standards with particular emphasis on desired outcomes to be addressed to the European Commission to ask standardisation bodies to mandate certain standards.
- Mapping members' current approaches through a short survey.
- Creating a library of standards used by members.

# The Sharing cities replication Work Package

 Urban Platform	●	●	

Key: ● Implement ● Co-design ● Validate

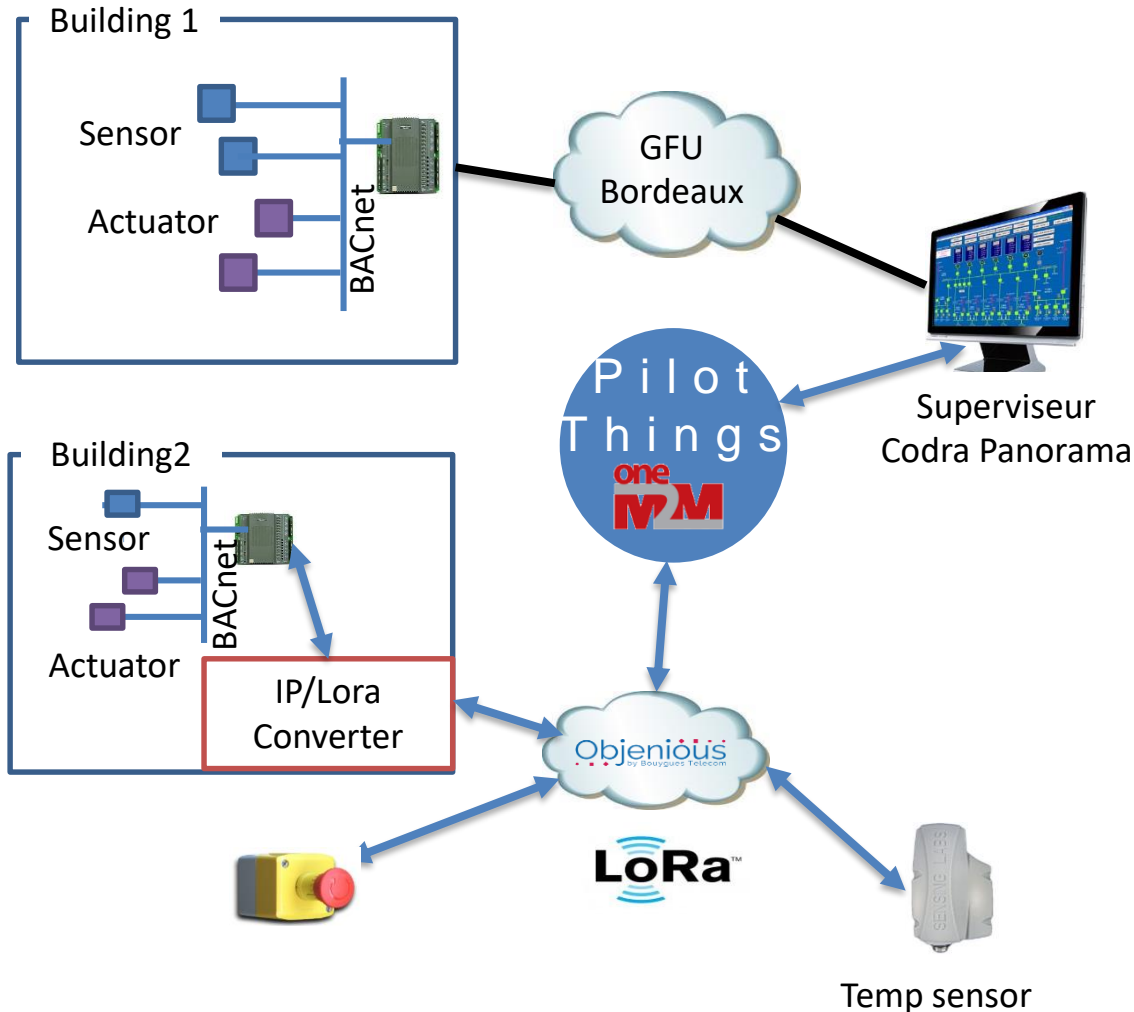

WG SDMC will work on deployment of ICT systems, and networks, and sites allowing interactions for data capture (both data consumers and providers) and management of data within each service and between different functions and services and will produce:

- Standardisation work on specific engineering of SDMC ICT
- Specifications of topology and functional requirements
- Specifications of functional and physical characteristics of interfaces
- Standardisation work on operational sustainability management

## A first TS 103 463 stable draft released

Defining indicators (KPIs) for Smart Cities expressing city level in terms of People, Planet, Prosperity and Governance.

# A use case for energy management in Bordeaux's schools

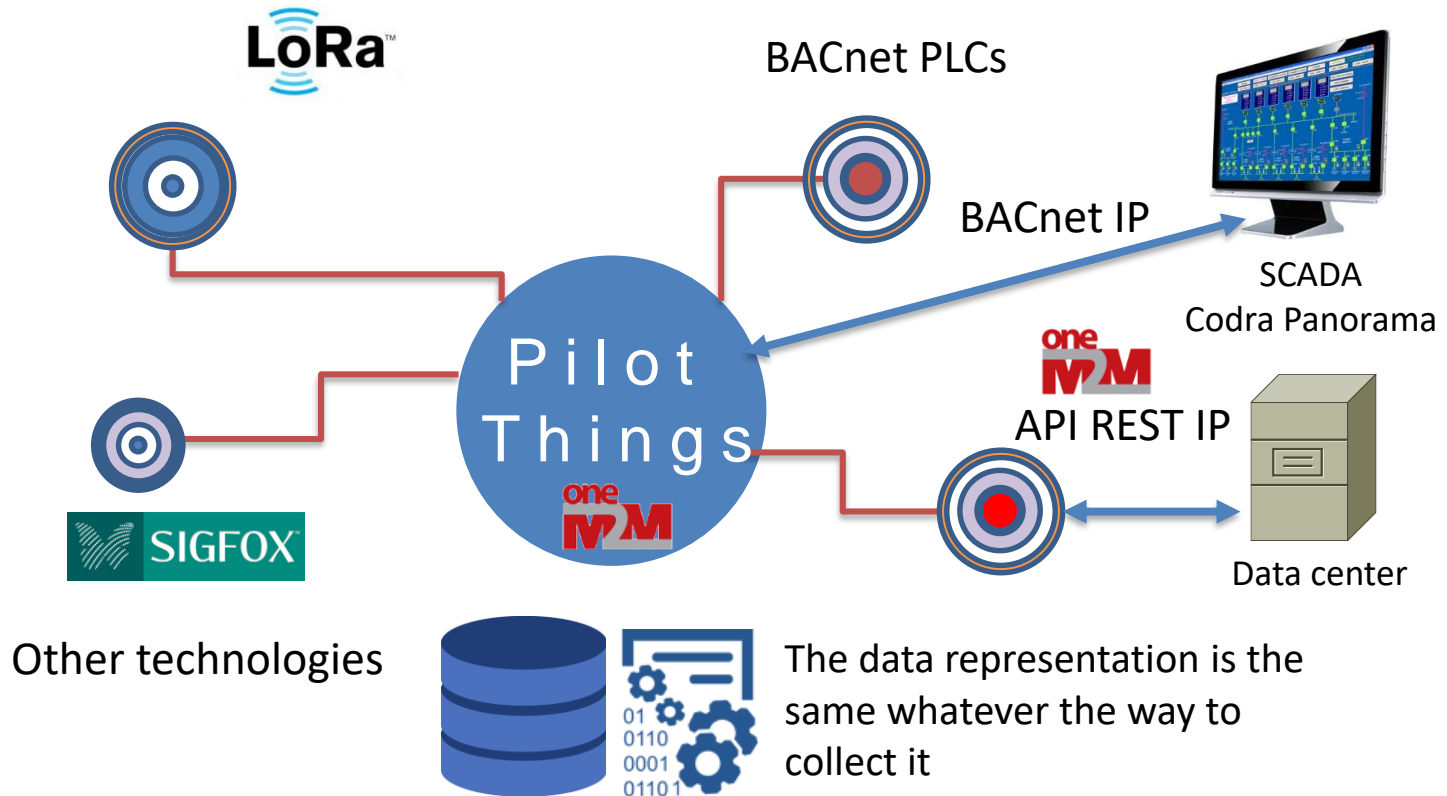

For remote sites without IP connection, converter retrieves data from BACnet PLCs and then uses Lora (Objenious operator) technology to communicate

The new Lora compatible sensors communicate directly via the Objenious operator.

Pilot Things software harmonises different data from different buildings and technologies
